

1

2

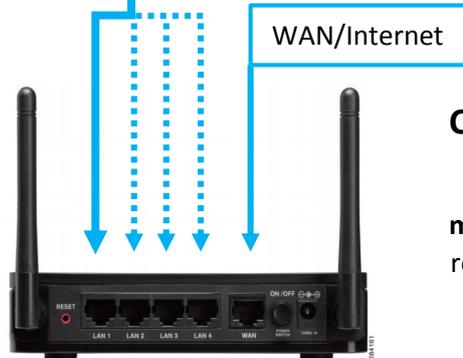

LAN port 1

### HUR SmartTouch Microserver

Connect the microserver from **LAN port 1** to one of router's LAN ports.

3

### Cisco Router

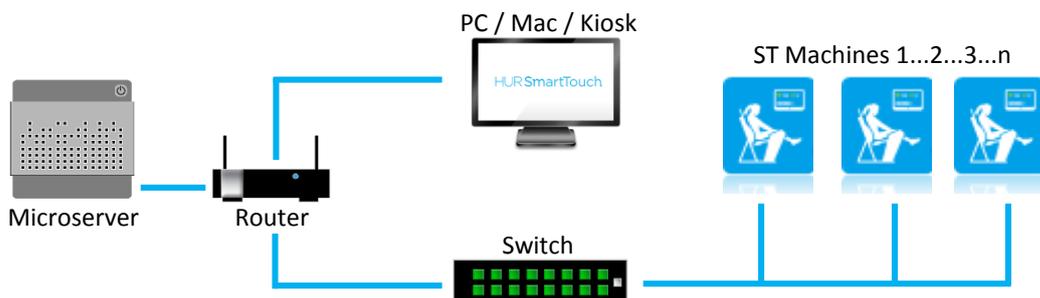

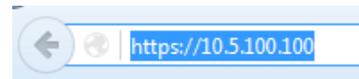

Connect **all machines** to the router using the **LAN ports**. Please note that when connecting more than 3 machines, switches will be needed.

**NOTE!**

*DO NOT FORCE MICROSERVER TO SHUT DOWN BY CUTTING OFF THE POWER!*

1. Connect all machines including the microserver to the router
2. Turn the router, microserver and machines on
3. Connect a PC or Mac to this network
4. Use a web browser to access the HUR SmartTouch software at <https://10.5.100.100>

## TROUBLESHOOTING

Problem	Checklist
<p><b>All machines are displaying</b></p>  <p><b>on the machine screen. As a result users cannot login to the machines.</b></p>	<ul style="list-style-type: none"> <li>• Is the server running? The local server can take time to boot up especially after it has been forced to shutdown. See if the light is green on the server.</li> <li>• Is the router turned on?</li> <li>• Are you connecting the micro server from LAN port 1 to the router's LAN port? Check the port connection lights on the router.</li> <li>• Are the machines connected to the router directly or through switches? Check the port connection lights on the router and on the switches.</li> <li>• Did you start the router before the server? If not, then restart the server to make sure it has correct network settings.</li> <li>• Network access controls (firewall/filtering) when using customer's own network. Please contact the customer's IT department.</li> </ul>
<p><b>One machine is displaying</b></p>  <p><b>on the machine screen. As a result users cannot login to the machine.</b></p>	<ul style="list-style-type: none"> <li>• Check the port connection light on the switch or on the router where the machine connects. If the color is red or there is no light, then there is likely a physical connection problem. If the color is green, then there is likely a setting problem.</li> <li>• Use the middle RJ45 LAN port on the display.</li> <li>• Machine's internal LAN cable.</li> <li>• Network connectors on the machine, on the router and on the switches.</li> <li>• Server settings in the machine setup. See if the server address is correct.</li> <li>• Network access controls (firewall/filtering) when using customer's own network. Please contact the customer's IT department.</li> </ul>
<p><b>Browser cannot find the server at <a href="https://10.5.100.100">https://10.5.100.100</a> and the admin software cannot be used.</b></p>	<ul style="list-style-type: none"> <li>• Make sure you are in the same network as the server</li> <li>• Is the server running? The local server can take time to boot up.</li> <li>• The web browser might complain about an untrusted connection. You can safely ignore the warning and continue to the page (add an exception if necessary).</li> </ul>
<p><b>Machine says that it cannot connect to the EM and can only enter the setup.</b></p>	<ul style="list-style-type: none"> <li>• Check that the USB cable from the EM card is connected to the panel PC.</li> <li>• Is the red light flashing on the EM card? If not, then check the power connection(s) to the card.</li> <li>• Contact HUR Service.</li> </ul>
